

Leveraging Digital Health Tools to Advance Health Equity

GEORGIA

To address gaps in technology adoption that impact underserved communities, the National Center for Primary Care (NCPC) at Morehouse School of Medicine is examining the adoption and use of digital health tools by primary care clinicians in four southeastern states: Georgia, Kentucky, North Carolina, and Tennessee.

Digital health tools (DHT) include:

Georgia Demographics

Total Population: 10.5 million+

4% Asian | 33% Black | 3% Other | 60% White

Hispanic Ethnicity

Live in Rural Area

Number of Survey Participants in Georgia ZIP Codes
 Yellow 0 Blue >=1

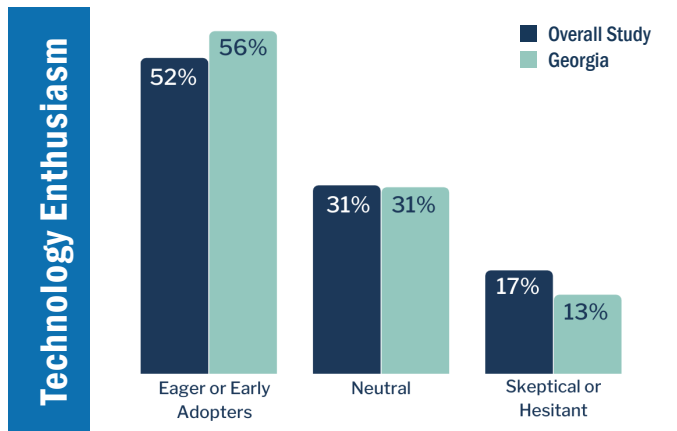

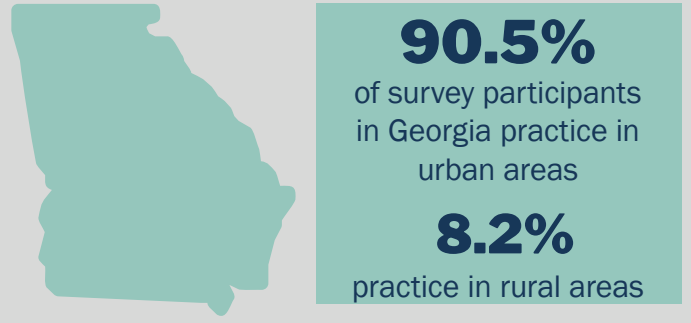

More than 400 clinicians in Georgia have completed the survey, highlighting the challenges and opportunities they have experienced using digital health tools.

Social Determinants of Health in Georgia

Survey Participants Demographics

The majority of the 400 clinicians from Georgia who participated in the survey held MD or DO credentials, specialized in primary care, and practiced in urban areas. They reported being satisfied with existing DHT.

Current Digital Health Tool Use

70.8% of respondents were connected to the State HIE

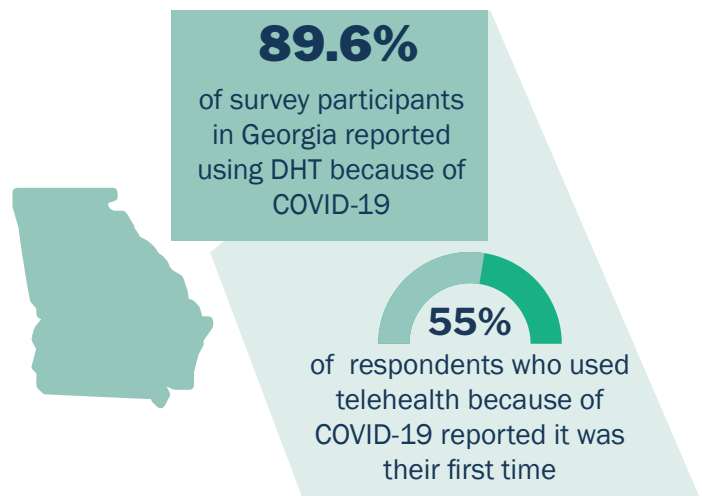

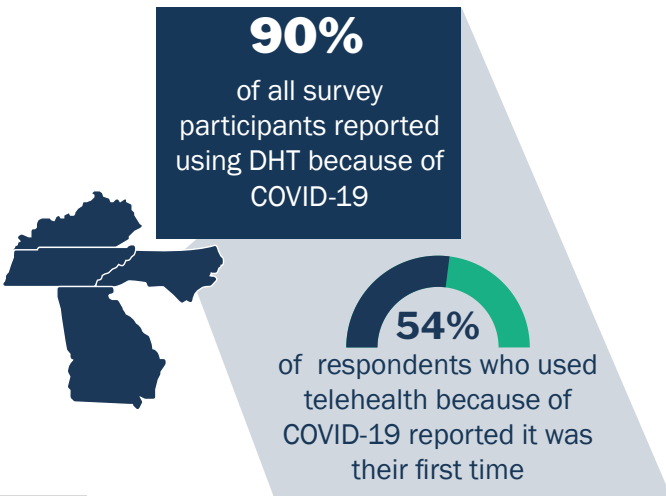

39.9% of respondents were using the State HIE

Seven in 10 providers reported being connected to the Health Information Exchange (HIE), but less than half reported using it.

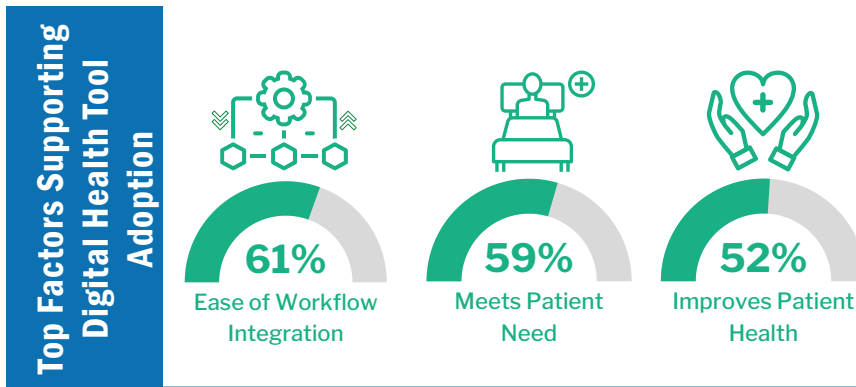

Digital Health Tool Use and COVID-19

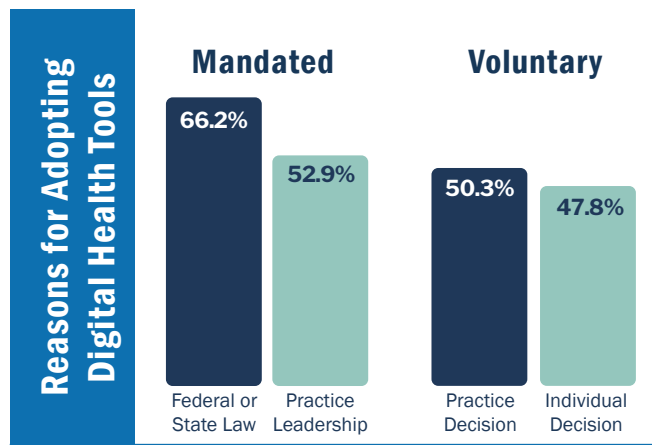

Factors that Support and Impede Digital Health Tool Adoption

“Why should I cater to the EHR? The EHR should cater to me.”
-Focus Group Participant

“When asked what would you tell leaders and decision-makers to help better serve patients: “A [national] health information exchange or EMR that you can access everybody's information no matter where they went and ideally would include social services as well. Maybe even the jail, like truly everything.”
-Focus Group Participant

“...at our center, a lot of our front desk people are assuming that our older clientele were not tech-savvy. They weren't even saying, "Give me your email address, let me sign you up for the portal." I said, "No. If you ask them, most of them have [an email address].” My dad's 80 and he's like, "I want a new Apple Watch, my email is whatever." Now, he does break down and wait for my children to come because he locked himself out. But they are on and using it.”
-Focus Group Participant

Reasons for Digital Health Tool Use after COVID-19
